Job Responsibilities

Clevertech

Senior Software engineer, developing web and server-side applications with a focus on education, supporting the US educational system to teaching children about Science, Math, and Engineering.

✍ My responsibilities are:

- Frontend and Backend development of web applications that manage teachers' class data.
- Development and maintaining of integration between our systems and ClasskLink/Clever.
- Technical grooming and risk analysis of user stories.

Junglescout

Software engineer, developing web and server-side applications with a focus on data analysis of sales to help new entrepreneurs selling products on Amazon.

✍ My responsibilities are:

- Frontend and Backend development of web applications that manage sales data from Amazon, creation of segments, and market trends analysis.
- Development and documentation of public APIs according to the most up-to-date specifications.
- Focus on systems performance due to the great volume of data streams.
- Development of Infrastructure as Code using AWS CDK 2.0.
- Development of Serverless systems with distributed and scalable architecture using API Gateways, Lambdas, Queues, and Monitoring.
- Daily use of AWS resources such as ECS, S3, Elastic Beanstalk, Codepipelines, etc.
- Technical grooming and risk analysis of user stories.

DTI Digital

Lead Fullstack Developer, developing web and server-side applications with a focus on managing the analysis of enterprise development.

✍ My responsibilities are:

- Frontend and backend development of web applications for managing analysis and enterprise development.
- Development and documentation of APIs to provide complex data regarding the analysis of enterprise projects.
- Planning and structuring the development workflow, managing and monitoring sprints.
- Technical grooming and user story risk analysis.
- Planning and Modeling of databases for applications;
- Training and supervision of new developers.
- Creation of build and release pipelines in Azure DevOps (CI / CD).
- Supervise the execution and cadence of the development rites in the squad.
- Evangelize the development process excellence as part of the operations chapter.

M2M Telemetry

Fullstack developer, developing web and server-side applications with a focus on IoT.

📌 My responsibilities are:

- Frontend and backend development of web applications of IoT equipment management.
- Development of server-side applications that communicate directly with IoT devices on the field.
- Development and documenting of REST APIs for integration with final customers.
- Flow planning and structuring of internal and external applications.
- Planning and modeling of application databases.
- Creation and maintenance of external and internal applications (Cloud, Local Servers) infrastructure.

Freelancer

Frontend developer, working on static websites and blogs for small companies, bands, and musicians.

📌 My responsibilities were:

- Plan and design every interface and talk directly to the customer to solve project scope and layout changes.
- Develop the front of applications based on customer specifications.
- Make the deployment of websites on servers and take care of all the web hosting and domain registering.
